

Matthew Chen

Senior Full Stack Engineer

Toronto, ON • (647) 692-7888 • mattchen056@gmail.com

Full Stack Engineer with 10 years building scalable web applications, cloud-native platforms, and distributed systems across fintech, healthcare, and enterprise software environments. Delivered customer-facing products and internal platforms using React, TypeScript, Node.js, Python, C#, .NET Core, AWS, Docker, Kubernetes, PostgreSQL, and Redis. Comfortable owning projects end-to-end, from architecture and infrastructure through production support and continuous delivery. Recognized for mentoring developers, solving complex production issues, and partnering closely with product and engineering teams to deliver reliable software at scale.

SKILLS

- Languages: JavaScript, TypeScript, Python, C#, SQL, Java, HTML5, CSS3
- Frontend: React, Next.js, Redux, Context API, React Query, Tailwind CSS, Material UI, Vite, Webpack
- Backend: Node.js, Express.js, NestJS, ASP.NET Core, .NET 8, REST APIs, GraphQL, Microservices
- Cloud & Infrastructure: AWS (EC2, ECS, Lambda, S3, RDS, CloudWatch, API Gateway), Docker, Kubernetes, Terraform, Nginx
- Databases: PostgreSQL, SQL Server, MySQL, MongoDB, Redis
- Messaging & Event Processing: RabbitMQ, Kafka, AWS SQS, Event-Driven Architecture
- DevOps & CI/CD: GitHub Actions, Azure DevOps, Jenkins, Git, CI/CD Pipelines
- Monitoring & Security: Datadog, Grafana, Prometheus, ELK Stack, OAuth2, JWT, OpenID Connect
- Soft Skills: Technical Leadership, Mentoring, Cross-Functional Collaboration, Problem Solving, Stakeholder Communication, Roadmap Planning, Agile Delivery

PROFESSIONAL EXPERIENCE

Senior Full Stack Engineer / JIG Technologies

06/2024
~ Present

- Architected cloud-native applications using React, TypeScript, Node.js, .NET Core, PostgreSQL, Redis, and AWS, supporting business-critical operations for multiple clients.
- Delivered scalable REST API platforms handling over 2 million monthly requests while maintaining 99.95% availability.

- Refactored legacy monolithic applications into containerized microservices using Docker and Kubernetes, reducing deployment risk and accelerating release cycles by 45%.
- Diagnosed and resolved complex production incidents across frontend, backend, database, and infrastructure layers, cutting mean resolution time by 40%.
- Implemented CI/CD pipelines using GitHub Actions and Azure DevOps, reducing deployment effort from hours to minutes.
- Collaborated with product managers and client stakeholders to scope features, define technical roadmaps, and prioritize platform investments.
- Introduced engineering standards covering code reviews, testing practices, security controls, and observability.
- Guided junior and intermediate developers through architecture reviews, pair programming sessions, and technical mentoring.

Senior Software Engineer / MNP Digital
05/2024

09/2018 ~

- Built full-stack platforms using React, TypeScript, Node.js, Python, AWS, PostgreSQL, and Docker, supporting thousands of daily users.
- Designed distributed services and API ecosystems that reduced response latency by 35% while improving scalability under peak load.
- Led modernization initiatives migrating legacy applications to cloud-native AWS environments, reducing infrastructure costs by 30%.
- Developed reusable frontend component libraries that accelerated feature delivery across multiple product teams.
- Created event-driven integrations using RabbitMQ and Kafka to improve reliability and support asynchronous processing workflows.
- Optimized database performance through indexing, query tuning, caching strategies, and schema improvements, reducing reporting times by 60%.
- Partnered closely with product managers, designers, and engineers to deliver solutions aligned with business objectives.
- Established secure development practices including OAuth2 authentication, role-based access controls, and automated security validation.
- Supported production systems through monitoring, incident response, root cause analysis, and continuous improvement initiatives.
- Mentored developers and participated in technical interviews, onboarding programs, and architecture reviews.

Software Developer / Novus Health

10/2014 ~ 07/2018

- Developed customer-facing web applications using C#, ASP.NET MVC, JavaScript, React, SQL Server, and REST APIs.

- Delivered secure healthcare workflows that streamlined patient interactions and reduced manual administrative effort by 25%.
- Implemented backend services integrating clinical, eligibility, and wellness data from multiple external systems.
- Improved application performance through caching, asynchronous processing, and database optimization techniques.
- Automated deployment and testing processes, significantly reducing release-related defects.
- Worked directly with business analysts and healthcare stakeholders to translate requirements into scalable technical solutions.
- Maintained high availability production systems and resolved critical customer-facing issues.
- Contributed to architectural planning, technical documentation, and long-term platform modernization initiatives.

EDUCATION

Bachelor of Computer Science

University of Toronto
