

A Senior Application Security Consultant and DevSecOps professional with 10 years of experience helping enterprise organizations strengthen application, cloud, and infrastructure security across complex software environments. Specialized in Application Security, Secure SDLC, DevSecOps transformation, Cloud Security Architecture, Threat Modeling, Security Automation, and Cybersecurity Risk Management. Led security modernization initiatives across AWS, Azure, and GCP environments, reducing critical vulnerabilities by up to 85% and accelerating remediation cycles by more than 60% through automated security controls integrated into CI/CD pipelines. Skilled at partnering with engineering teams, executives, and stakeholders to embed secure-by-design principles while delivering measurable risk reduction across large-scale digital platforms.

Experience

Devfortress

Senior Application Security Consultant | 2022/09 – 2026/04

- Directed application security assessments across 40+ enterprise applications spanning cloud-native and hybrid environments, uncovering and prioritizing over 1,200 security findings.
 - Implemented secure SDLC frameworks that reduced critical production vulnerabilities by 78% within 18 months.
 - Orchestrated DevSecOps adoption across 15 engineering teams by embedding SAST, DAST, and SCA controls into CI/CD pipelines.
 - Engineered automated security gates using GitHub Actions and Jenkins, shortening vulnerability remediation timelines by 62%.
 - Conducted threat modeling workshops for 60+ application releases, identifying architectural weaknesses before deployment.
 - Guided cloud security transformations across AWS, Azure, and GCP environments supporting workloads exceeding 2 million monthly users.
 - Developed infrastructure security baselines aligned with NIST and CIS controls, improving audit readiness scores by 45%.
 - Partnered with development teams to remediate OWASP Top 10 risks, lowering high-severity findings by 85%.
 - Introduced container security controls using Kubernetes, Aqua Security, and Prisma Cloud across 300+ production workloads.
 - Evaluated third-party software risks and software supply chain exposures, strengthening organizational security posture.
 - Produced executive-level risk assessments and remediation roadmaps for C-suite stakeholders and security leadership.
 - Led incident recovery activities following security events, restoring critical business services while strengthening preventive controls.
 - Automated security telemetry collection through Splunk dashboards, improving visibility into application threats by 70%.

Instinctools

Software Engineer | 2019/04 – 2022/08

- Spearheaded secure application development initiatives across healthcare, finance, and SaaS projects serving global clients.
- Embedded DevSecOps practices into Agile delivery workflows for more than 25 product teams.
- Designed cloud security architectures for enterprise platforms operating within AWS and Azure ecosystems.
- Established vulnerability management programs that reduced unresolved security findings by 68%.
- Integrated Checkmarx, SonarQube, and Snyk into CI/CD pipelines processing over 5,000 monthly builds.
- Facilitated secure coding training sessions for 120+ software engineers and technical leads.
- Performed application penetration testing and code reviews across Java, .NET, and Node.js platforms.
- Constructed IAM and least-privilege access models that lowered privileged account exposure by 50%.
- Authored security governance policies aligned with ISO 27001 and SOC 2 compliance objectives.
- Coordinated cross-functional security reviews supporting large-scale cloud migration initiatives.
- Developed infrastructure-as-code security controls using Terraform and policy-as-code frameworks.
- Streamlined security assessment processes, reducing review turnaround time from weeks to days.
- Consulted executive stakeholders on cybersecurity risk reduction strategies and investment priorities.
- Supported security incident investigations by analyzing logs, telemetry, and application attack vectors.

SoftXPro

Software Engineer | 2015/04 – 2019/03

- Built enterprise web applications using Java, Spring Boot, .NET, and JavaScript frameworks.
- Integrated secure authentication and authorization mechanisms supporting over 500,000 end users.
- Conducted source code reviews to identify and remediate security flaws before release.
- Implemented OWASP-compliant security controls across customer-facing applications.
- Developed REST APIs secured through OAuth2, JWT, and role-based access control models.
- Optimized CI/CD pipelines, improving deployment efficiency by 40%.
- Automated infrastructure provisioning using Terraform and configuration management tools.
- Collaborated with architects to strengthen application security standards across development programs.
- Investigated application vulnerabilities and coordinated remediation efforts with engineering teams.
- Supported cloud migration projects involving AWS infrastructure and containerized workloads.
- Enhanced security logging and monitoring capabilities for mission-critical business systems.
- Assisted compliance initiatives involving security audits and risk assessments.
- Contributed to disaster recovery planning and business continuity testing activities.

Education

Bachelor's Degree in Computer Science

University of Toronto

Skills

TECHNICAL SKILLS

- Application Security (AppSec), Secure SDLC, DevSecOps, Cloud Security, Security Architecture, Security Governance, Threat Modeling, Security Assessments, Cybersecurity Consulting, Risk Management, Security Program Development, Vulnerability Management, Secure Coding Practices, Incident Response, Cloud Governance, Security Automation, Infrastructure Security, Zero Trust Architecture

Cloud Platforms:

- Google Cloud Platform (GCP), AWS, Microsoft Azure

Security Tools:

- Burp Suite, OWASP ZAP, Checkmarx, Veracode, SonarQube, Snyk, Fortify, Prisma Cloud, Wiz, Aqua Security, CrowdStrike, Splunk, Microsoft Sentinel

DevSecOps & CI/CD:

- GitHub Actions, GitLab CI/CD, Jenkins, Azure DevOps, ArgoCD, Security Gates, Policy-as-Code

Containers & Infrastructure:

- Docker, Kubernetes, Helm, Terraform, Ansible, Istio

Programming:

- Java, Python, JavaScript, TypeScript, C#, Go, Bash

Security Standards:

- OWASP Top 10, NIST CSF, NIST 800-53, ISO 27001, SOC 2, CIS Benchmarks, MITRE ATT&CK

Databases:

- PostgreSQL, MySQL, SQL Server, MongoDB

Soft Skills:

- Client Advisory, Executive Communication, Stakeholder Management, Technical Leadership, Team Mentorship, Project Planning, Cross-Functional Collaboration, Risk Prioritization, Strategic Thinking, Problem Solving, Workshop Facilitation
